The sterile vascular access kit contains sterile supplies needed to access an implanted vascular device, such as a Mediport. The kit contains all the medical supplies needed to accomplish the vascular access procedure, thereby eliminating the need to locate and gather such medical supplies. The medical supplies include a facemask and gloves, Tegaderm dressing for providing a sterile covering, a needleless blood transfer device, an injection cap, syringes containing normal saline for flushing the tubing, and empty syringe for drawing blood, preferably a syringe of heparin for flushing the tubing and port. The kit also contains sponges, sterile adhesive strips, alcohol prep pads and Chloraprep for cleansing the access site.
